How To Take Part in this Crowd Funding Opportunity

History/Rationale: Any new coin can raise funding in different ways ICO, Angel Investors, Tokenbox etc. More commonly we see self promotion especially with coins such as Pushi that did not have funding capital to start out with and were unable to raise enough capital to pay for marketing and promotion on such a scale. It was and/is a grassroots coin based around the idea of a community coin, just like its ancestor Bitcoin. Pushi has grown steadily but has never realized it's true market value and sits like a diamond in the rough of all those scam coins and other dubious altcoin offerings. PushiCoin Team maintained that it was important to their philosophy and ideology to build the base infrastructure of Pushi before anything else. No hype, no Youtube shillers, just honest hardwork in building a base platform. Pushi has succeeded in doing this, and not getting paid for doing so I might add.

Pushi has a stable blockchain, and a fully functional wallet. Community was then built around this on the [Discord Server](https://discord.gg/TE5yRwB) (<https://discord.gg/TE5yRwB>). The community grew and with it the number of Masternodes and this was soon in excess of 300 nodes. Faced with having to support this number of people creating Masternodes required a consistent high level of support and this was achieved on the Pushi Discord Server. As the demand increased and put pressure on the Dev Team taking them away from coin development to supporting MasterNodes something had to be done. Fortunately some community MN holders took up the challenge and took over the Admin and Tech Support of Pushi Discord Server. They created a [MasterNode Setup Guide](#) that is equal in quality of that which can be found in top 100 coins.

The increase in collateral for Masternodes from 1k to 10k presented some philosophical difficulties as there were some MN investors who could not make that increase in coin and would be effectively be excluded, the very people that took a chance from the beginning. To this end Pushi Devs and Community Admins discussed the options and the result was a community run MasterNode Sharing service being created. This allowed those that could not make the necessary increase in coin themselves to re-purpose their coins and stay invested in Pushi. It also left a pathway for easy access by anyone to invest in Pushi (at a minimum of 500 coin). There are currently 13 such Masternodes as well as the 86 individually owned private MasterNodes.

Pushi then launched coin governance which again shows the deep rooted

philosophy that it is a community coin. You often see on coin roadmaps governance listed as a feature, when it really isn't it is a basic necessity of any credible coin, if you believe in the principles of decentralization. More importantly it allows those invested in the coin to have a say and even control over how the coin funds are disbursed. The "**wisdom of the crowd**", so to speak. There are many examples of scams and projects not capable of managing correctly the raised funds, which contributes to a negative image, governance thereby is necessary any coin that doesn't should be scrutinized further if not. Full details of Pushi Coin Governance can be found [HERE](#). The first proposal that was submitted and unanimously voted for by the community was the use of governance funds to be put into marketing and promotion. This funding (about 30k Pushi per governance cycle) is currently being used for various coin competitions and incentives, to reward admins and moderators for their work, and cover, minimally, the real costs they incur. So marketing and promotion is now the focus for Pushi growth and is being addressed with community based action.

PushiCoin Team are updating the website to include some vital components that were missing; Dev Team, Whitepaper and of course an updated Roadmap and of course a use a case (utility/app). A new Community Forum website will be operational very soon as our activities are outgrowing what Discord can offer in terms of information dissemination, processing etc. So we will tick all the boxes when looking at what is required to be considered an authentic coin opportunity.

These actions and growth have all been achieved in a few months without any fanfare or hurrahs. No shilling, no hype, just the road that needed to be traveled to build a fully functional and solid framework. If Pushi Coin is to remain viable it will take community involvement to do so.

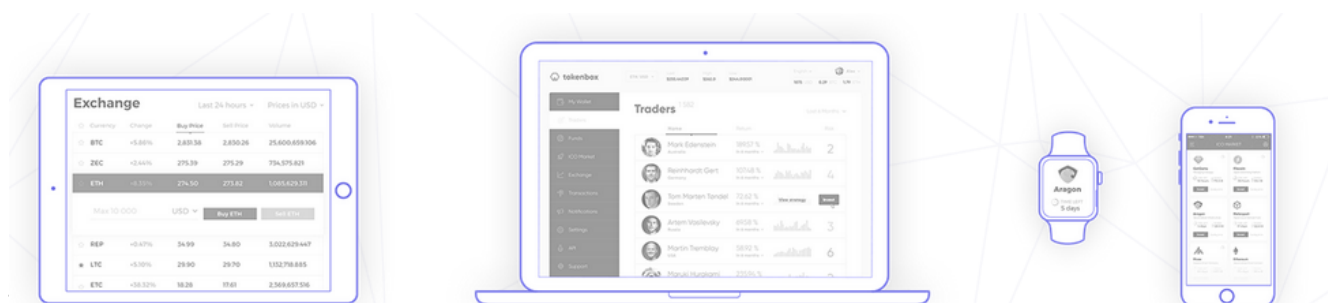

Which brings us to Coin Trading/Exchanges. Most, if not all, mid to top level exchanges require large sums of money to get your coin listed and the choice is simple pay the fees or stay listed on the lowest tier exchanges. Pushi is listed on two of these and probably the most well known of these is Graviex. Graviex is low volume and low recognition in terms of successful coins. This leads to a big question that faces us all, Devs, Admins, Investors, and anyone else vested in Pushi in some shape or form.

Q. How do we get listed on a mid level exchange when we don't have the required capital to pay for listing fees?

A couple of community members gave us the answer Crowd Funding! That brings us to today and the next step. Clearly, the heady days of Bitcoin are pretty much over and it is unlikely although not impossible that Pushi will be valued at 10k. However, it does have the necessary foundations to increase to somewhere between \$1 - \$5 in the medium term. 10K coin at

current much undervalued rate of $0.0000016 = \$0.012 = \120 . Given a future price of say \$1 which could well be achieved that is 10x. So now your MN, your investment coin, mining rewards pay off. That 10k is now \$10,000 not \$120 and you have the additional higher ongoing growth and reward. This then allows Pushi to have a revenue stream to continue actions to maintain growth

Exchanges: With the success of Crypto Coins we saw massive growth in Exchanges and with their success and need for funding getting listed on Mid & Upper Level Tier exchanges. To overcome this we are going to see if we can crowdfund the cost. Here is how that will work.

Process for CrowdFunding a Mid-Level Tier Exchanges

For the purposes of clarity where you see community member in this document the definition of that is:

Any person holding Pushi Coin or some other vested interest in the operational aspects of Pushi. (investors, MN Owners, Pushi Pool Operators, Moderators, Administrators etc).

Step 1. Pushi Announcement to proceed to present a crowdfunding opportunity to get Pushi listed on a Mid Tier Exchange with the view to increasing Pushi value and future growth. This crowdfunding call will be driven by the community in all aspects. Full transparency and security will be monitored and checked on the Pushi Discord server in the **#exchange-crowdfunding** channel. This document constitutes the announcement.

Step 2. Pushi Dev will create a multisig Bitcoin Wallet (Electrum) and all funds generated/donated by the community will be transferred to a specific address in the wallet used for this activity and nothing else. This provides **security** by making sure that **no single person has access to the funds**

gathered and to use them ***requires a minimum of 2 of the 3 consenting signatures***. Namely, [Tekcruzer](#), [ETN_HERO](#), [PushiCoinTeam](#) All fund releases will be ***consented to by the community prior to use in the #exchange-crowdfunding channel***.

Address: 3Qm5swZZrzpKZP3BmAQRci2ahQg1WU2kBbs

Step 3. Community members will be asked to post suggestions in the ***#exchange-crowdfunding*** channel on Discord which exchange Pushi should be listed and we will make a list of the top 3 choices.

Step 4. Community Members will cast a Final Vote for which Exchange it should be. Costs will be determined by PushiCoin Team and posted in the ***#exchange-crowdfunding*** channel. Amount of votes will be **proportional** to the amount donated.

Step 5. Crowdfunding to the Wallet Address:

3Qm5swZZrzpKZP3BmAQRci2ahQg1WU2kBbs will commence. All donations will be made in BTC and will be anonymous (except to Crowdfund organizers) unless a donor wishes to make themselves know in a donors list created by the community members. Crowdfund organizers need to know so that proportional votes can be assessed and given.

Step 6. If by **August 2, 2018** funds collected do not reach at least **0.5 BTC** all the collected amount **will be refunded** to the same deposit address used for donation.

Step 7. If the amount collected exceeds the amount collected/required a further vote will be required to decide whether that funding remain with Pushi for further investment in an exchange or refunded to the community proportionally to the original donation. This will be conducted on Discord in the channel specified.

It does not need stating the obvious but this project is in the best interest of every Pushi coin owner from those holding small amounts to large amounts. We also understand that not everyone can make a donation al we ask is to do what you can no matter how small or how large. We can say as community members ourselves that we see the value in this and the need for undertaking a project such as this. ***If you have any doubts or concerns please don't hesitate to ask in open channel as***

transparency is of the utmost priority along with the security of transactions and accepting the wisdom of the crowd, YOU!

Lets give Pushi a big PUSH

Thank You
